

THE SOUTH CAROLINA
DEPARTMENT *of* ADMINISTRATION

SAFETY PROGRAM: FACILITY SAFETY INSPECTION

30 August 2010 (Updates: 10/30/12 & 1/29/2015, 8/14/2015)

The language used in this document does not create an employment contract between the employee and the agency. This document does not create any contractual rights or entitlements. The agency reserves the right to revise the content of this document, in whole or in part. No promises or assurances, whether written or oral, which are contrary to or inconsistent with the terms of this paragraph create any contract of employment.

Purpose

This document establishes procedures for the Safety Office of the Division of General Services (DGS), SC Department of Administration, to concentrate resources on inspecting facilities owned and operated by the Admin to identify and correct hazards in the workplace. Workplace inspections are conducted routinely by the Safety staff to identify safety and health hazards, and to ensure regulatory compliance with Occupational Safety and Health Act (OSHA) regulations and International Building and Fire Codes. Recognizing and correcting hazards through regular inspections are vital to the accident prevention process of our safety and maintenance programs. Facilities Management or the responsible tenant is notified of code violations and hazards which are monitored until corrected.

Policy

DGS Safety officers are to visit and inspect Admin owned and maintained facilities at least twice a year to enforce applicable codes. Facilities with greater risk of hazard exposure should be inspected quarterly or more often, as required. Facility safety inspections may be conducted with or without advance notice and may be comprehensive or limited in scope. Inspections are to be conducted at reasonable hours (during normal business hours between 8:00 a.m. and 5:00 p.m., Monday through Friday), unless the process requires inspection after hours, to minimize disruption to building occupants. DGS Safety officers shall encourage Building Maintenance and/or a tenant representative to accompany the Safety officer during the inspection so any unsafe conditions observed can be pointed out to them. DGS Safety officers may also stop and question workers, usually in private, about safety and health conditions and practices in their workplaces. While talking with employees, every effort is made to minimize any work disruptions.

Procedures

OSHA INSPECTION VISIT: For ALL Department of Administration divisions / offices / personnel - **Immediately notify Safety** at 737-2315 /2311 whenever OSHA officers come on site. Ask OSHA to wait for Safety to arrive so Safety can accompany the inspectors and assist in any investigation.

FIRE MARSHAL VISIT: Existing Admin facilities are under the jurisdiction of the Resident Fire Marshals of the DGS Safety Office. Please ask other visiting Fire Marshals (State Fire

Marshal, City of Columbia, Richland or Lexington Counties) to contact DGS Safety should they have fire and life safety issues with Department of Administration facilities.

SAFETY INSPECTIONS: DGS Safety officers are to be familiar with and enforce appropriate OSHA standards, fire and life safety codes, building codes, and other safety-related regulations. They are to be knowledgeable and experienced in the recognition and mitigation of safety and health hazards.

DGS Safety officers will be OSHA Officers and licensed Resident Fire Marshals to exercise and discharge all powers and duties vested in and acting under the authority of the SC Department of Labor, Licensing and Regulation (LLR) within the area of service, i.e., all Admin-owned and maintained facilities. Reference:

- South Carolina Code of Laws, [Title 41](#) - Labor and Employment, Chapter 3 – Department And Director Of Labor, Licensing, And Regulation
- SC Code of Laws, [Title 23](#) - Law Enforcement and Public Safety, Chapter 9 - State Fire Marshal
- LLR Office Of State Fire Marshal, Chapter 71, [Subarticle 1](#) Fire Prevention and Life Safety

If not accompanied, the Safety officer will attempt to personally contact the individual authorized to make the correction during or immediately following the inspection to identify and explain the hazardous condition(s) discovered. Identified hazards, including those corrected during an inspection, are to be documented.

The inspecting DGS Safety Officer will provide a written report of inspection to the appropriate person authorized to make the correction. Suspense for correction is normally 30 days from report transmittal but may be less depending on the immediacy of danger to life and health. Notification for a short suspense should be done personally or by phone. As well as identifying the discrepancy and the section of the regulation or code violated, the report should also provide options for possible corrective action. This report should be transmitted in person, by interagency mail or by electronic mail within ten (10) working days after the inspection. Note: Fire and life safety code violations should be documented in a separate report from other safety code violations. The DGS Safety Office will not issue citations with monetary fines associated with code or regulatory violations.

Correction of the hazards or violations will be verified preferably by the original DGS Safety officer with a follow-up inspection within 30 days but no later than the next scheduled inspection. Upon verification of correction the Safety officer will provide written notice of satisfactory closure which can be in the next inspection report.

If the responsible party cannot correct the hazard or violation by the suspense date, a plan of correction should be submitted to include interim temporary control measures and a schedule of actions towards final abatement.

Increased focus will be provided those responsible parties who are non-compliant or indifferent to safety regulations and thereby endanger employees. Failure to correct violations to the OSHA standard, fire code, building code and/or other safety related regulatory obligations and/or DGS Safety policies and procedures, or respond with a plan of action by the specified suspense will

result in a secondary notice. Failure to respond or correct an identified serious hazard / violation by the extended suspense date will be considered a willful neglect for employee safety and health. Continued repeated failure-to-abate violations are subject to referral to the appropriate state enforcement organization, i.e., the State Fire Marshal and/or the SC Department of License, Labor and Regulation – OSHA Compliance Office, where failure to correct the identified hazard is subject to a citation and notification of penalty / correction instruction order, a monetary fine and/or litigation.

DEFINITIONS: Occupational Safety and Health Act (OSHA) of 1970 Standard Title 29 of the Code of Federal Regulations (CFR), [PART 1903 Inspections, Citations, and Proposed Penalties](#) - If OSHA were inspecting our facilities the following are the types of violations that would be cited and the penalties that could be proposed.

Other Than Serious Violation - has a direct relationship to job safety and health but probably would not cause death or serious physical harm. A proposed penalty of \$100 up to \$7,000 for each violation is discretionary depending on the employer's good faith (demonstrated efforts to comply), history of previous violations, and size of business.

Serious Violation - there is substantial probability that death or serious physical harm could result and that the employer knew, or should have known, of the hazard. A mandatory penalty of up to \$7,000 for each violation is proposed but may be adjusted downward, based on the employer's good faith, history of previous violations, the gravity of the alleged violation, and size of business. Examples:

- A hazard / code violation discovered in the process of investigating an actual employee injury, illness or fatality in the workplace
- Work that involves but is not limited to:
 - Exposure to a fall hazard (unprotected edge to a lower level four or more feet below)
 - Exposure to a hazardous energy (i.e., failure to use lockout-tagout procedures for equipment powered by electrical, steam, pneumatics, hydraulics)
 - Hot work (such as welding, open flame)
 - Exposure to a crush or amputation hazard
 - Exposure to a combustible/flammable hazard
 - Entry to a confined space or excavation
 - Exposure to a hazardous chemical (reference Material Safety Data Sheet)
 - Exposure to a hazardous material (such as asbestos, lead)
 - Exposure to a hazardous atmosphere (such as toxic, lack of oxygen)
 - Imminent danger to life or health (there is a reasonable threat or expectation of the hazard to cause substantial reduction in physical or mental efficiency or shorten life through serious injury, illness or fatality immediately or within days)
 - Multiple or repeated employee / tenant complaints

Willful Violation - the employer knowingly commits or commits with plain indifference to the law, e.g., the employer either knows that what he/she is doing constitutes a violation, or is aware that a hazardous condition existed and made no reasonable effort to eliminate it. A minimum penalty of \$5,000 or up to \$70,000 may be proposed for each willful violation but may be adjusted downward, depending on the size of the business and its history of previous violations.

Usually, no credit is given for good faith. If an employer is convicted of a willful violation of a standard that has resulted in the death of an employee, the offense is punishable by a court-imposed fine (up to \$250,000 for an individual or \$500,000 for a corporation for a criminal conviction) or by imprisonment for up to six months, or both. (Note: Willful violations escalated to a state enforcement organization are subject to criminal proceedings.) Examples:

- Not correcting a recognized hazardous condition
- Ignore the hazard identified by an employee, DGS Safety or a SC or federal OSHA officer
- Not seek and/or did not follow guidance from DGS Safety/OSHA concerning appropriate corrective options
- Not allow employees the time for safety and health training or ensure its appropriateness
- Not adequately prioritize corrective measures to receive needed funding

Repeated Violation - a violation of any standard, regulation, rule, or order where, upon re-inspection, a substantially similar violation can bring a fine of up to \$70,000 for each such violation (the original citation must be final; a citation under contest may not serve as the basis for a subsequent repeated citation). Example: Two or more instances of the same hazard / code violation in the same facility or in multiple facilities operated by the same organization.

Failure to Abate Prior Violation - failure to abate a prior violation may bring a civil penalty of up to \$7,000 for each day the violation continues beyond the prescribed abatement date (i.e., by the suspense date).

De Minimis Violation - have no direct or immediate relationship to safety or health. De minimis conditions found during an inspection are documented but are not included on the citation. Example: Failure to post a citation.

Additional Violations: Falsifying records, noncompliance with posting requirements and assaulting, resisting, opposing, intimidating or interfering with a compliance officer are all subject to up to \$5,000 and imprisonment for up to 3 years.

Penalties – are fines assessed due to the code violation for employee exposure to the cited hazard. The DGS Safety Office does not assess fines. Repeated failure to abate the hazard / violation could result in referral to the appropriate state enforcement organization which can assess penalties based on the number of employees exposed and the seriousness of the hazard / violation.
